SIMATS ENGINEERING
ASSESSMENT TOOL 2

COURSE CODE: CSA04 **COURSE NAME: Operating Systems**

COURSE OUTCOME COVERED

CO1: *Apply the concepts of Operating System types, structures, and system calls to demonstrate their functions in various computing environments.* *(BL2, BL3)*

QUESTIONS: 5 **Total Marks:100**

Annexure A

Concept Mapping

Code of Conduct:

I ***Pugazharasan K (192511341)*** *(Name / Reg No) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment.*
I understand that any violation of academic integrity rules will result in disciplinary action.

Signature of the student: Pugazh.K

Annexure A

Concept Mapping

Question 1
Show a multi-level concept map integrating:
Operating System Types → OS Structures → System Calls → OS Functions.
Your map must show cross-links (e.g., how OS structure influences system call implementation). **(BL2)**

Question 2
Construct a comprehensive concept map representing:
Process Management, Memory Management, File System, and I/O System.
Include interdependencies and indicate where system calls interact with each component. **(BL3)**

Question 3
Sketch a comparative concept map for:
Batch OS, Time-Sharing OS, Distributed OS, and Real-Time OS.
Highlight differences, similarities, advantages, and limitations using linking phrases. **(BL2)**

Question 4
Illustrate a dynamic concept map showing the execution flow:
User Program → API → System Call Interface → Kernel → Hardware → Response back to User.
Include feedback loops and control flow paths. **(BL3)**

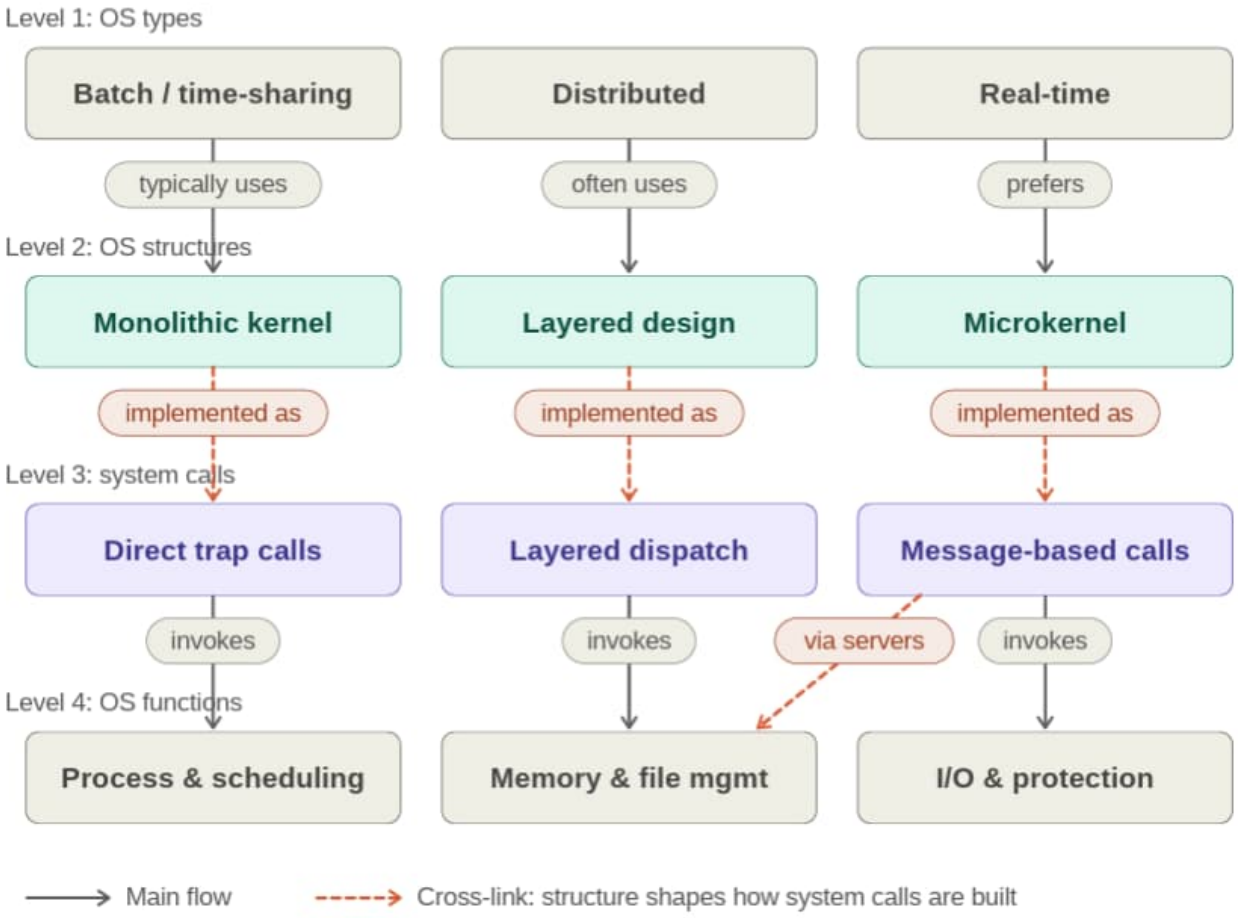

Question 5
Sketch a hierarchical + functional concept map for system calls:
Process, File, Device, and Information system calls.
Also show how they relate to OS services like scheduling, memory allocation, and device handling. **(BL3)**

RUBRICS FOR CALCULATION

Concept Mapping					
Criteria	**Weightage**	**Level 4 (Exemplary)**	**Level 3 (Proficient)**	**Level 2 (Developing)**	**Level 1 (Beginning)**
Concept Identification	25%	Identifies all key concepts from literature accurately and comprehensively	Identifies most key concepts with minor omissions	Identifies limited concepts; some are irrelevant or missing	Fails to identify essential concepts
Linkages	25%	Establishes clear, meaningful, and accurate relationships between concepts	Shows correct relationships with minor gaps	Relationships are weak, unclear, or partially incorrect	No meaningful relationships established
Organization	20%	Concepts are well-structured hierarchically with logical flow and grouping	Mostly organized with minor structural issues	Some organization but lacks clear hierarchy	No logical organization or structure
Integration of Literature	20%	Integrates multiple studies effectively to show connections and comparisons	Shows some integration of literature	Limited integration; mostly isolated concepts	No integration of literature evidence
Clarity	10%	Concept map is clear, neat, visually structured, and easy to interpret	Generally clear with minor readability issues	Clarity is reduced; difficult to interpret in parts	Poorly presented and hard to understand

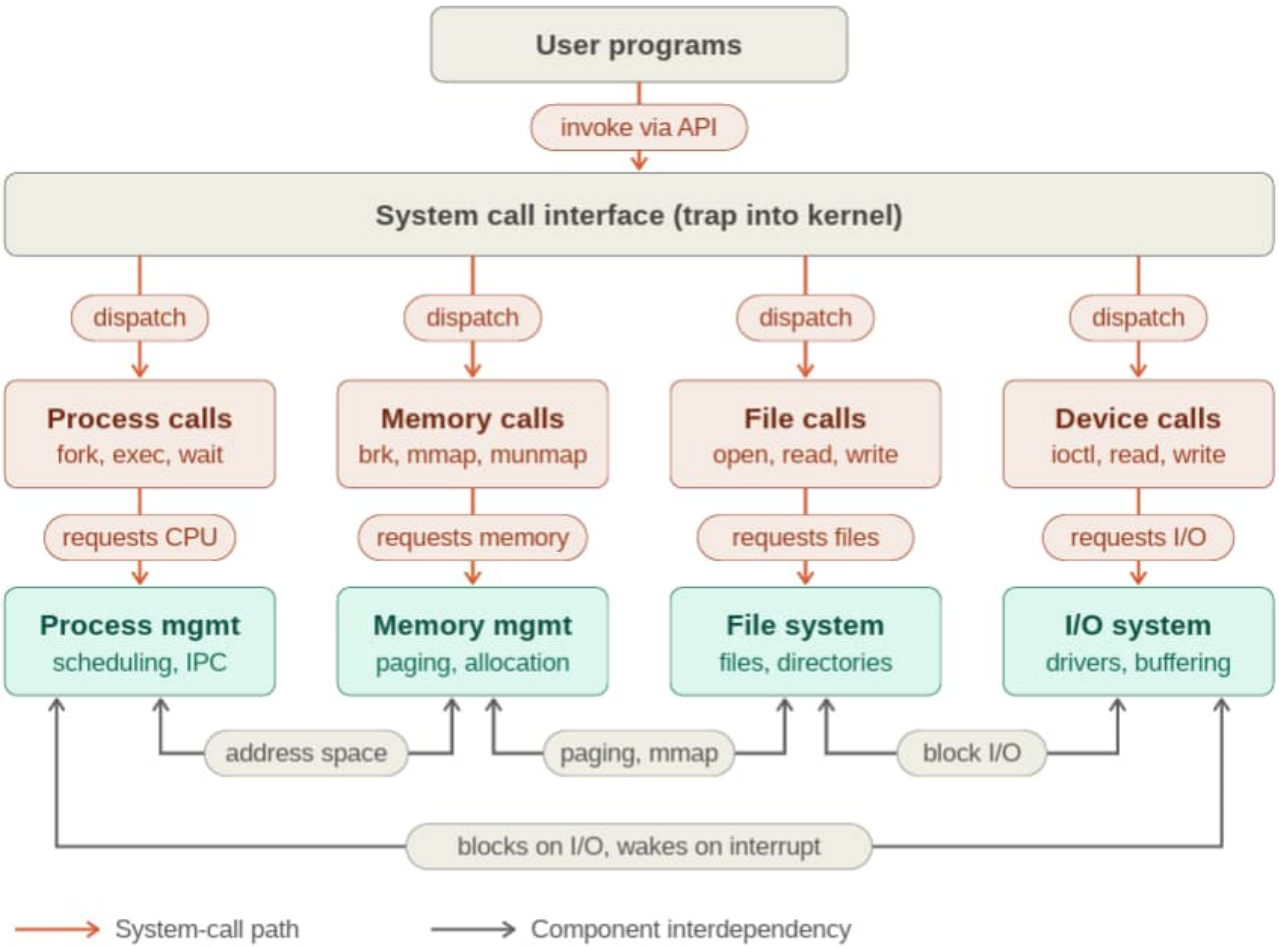

Question 1 (BL2)

Multi-level concept map: Operating System Types → OS Structures → System Calls → OS Functions, with cross-links showing how OS structure influences system call implementation.

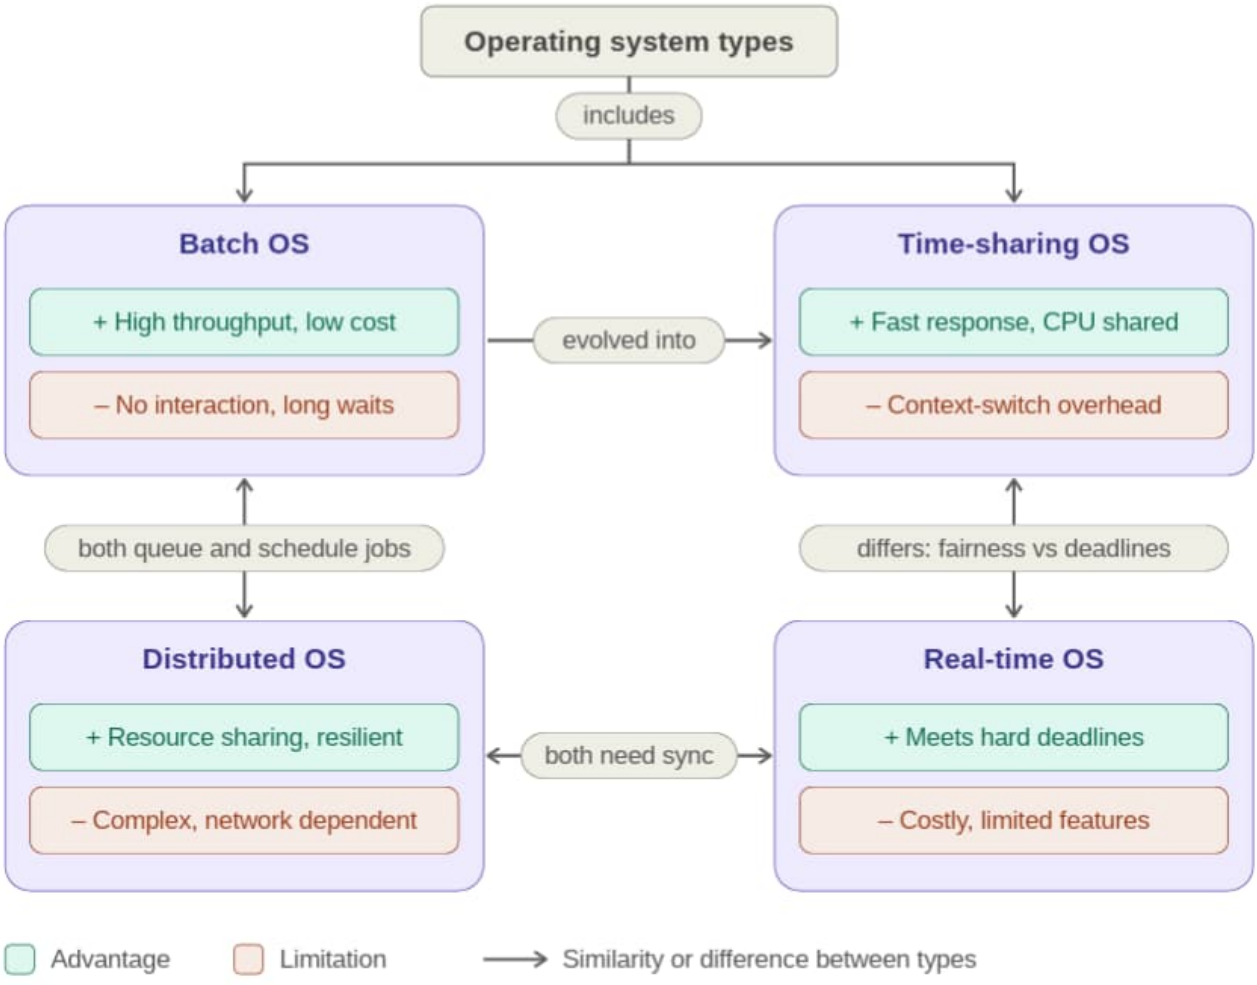

Question 2 (BL3)

Comprehensive concept map of Process Management, Memory Management, File System and I/O System, with interdependencies and the points where system calls interact with each component.

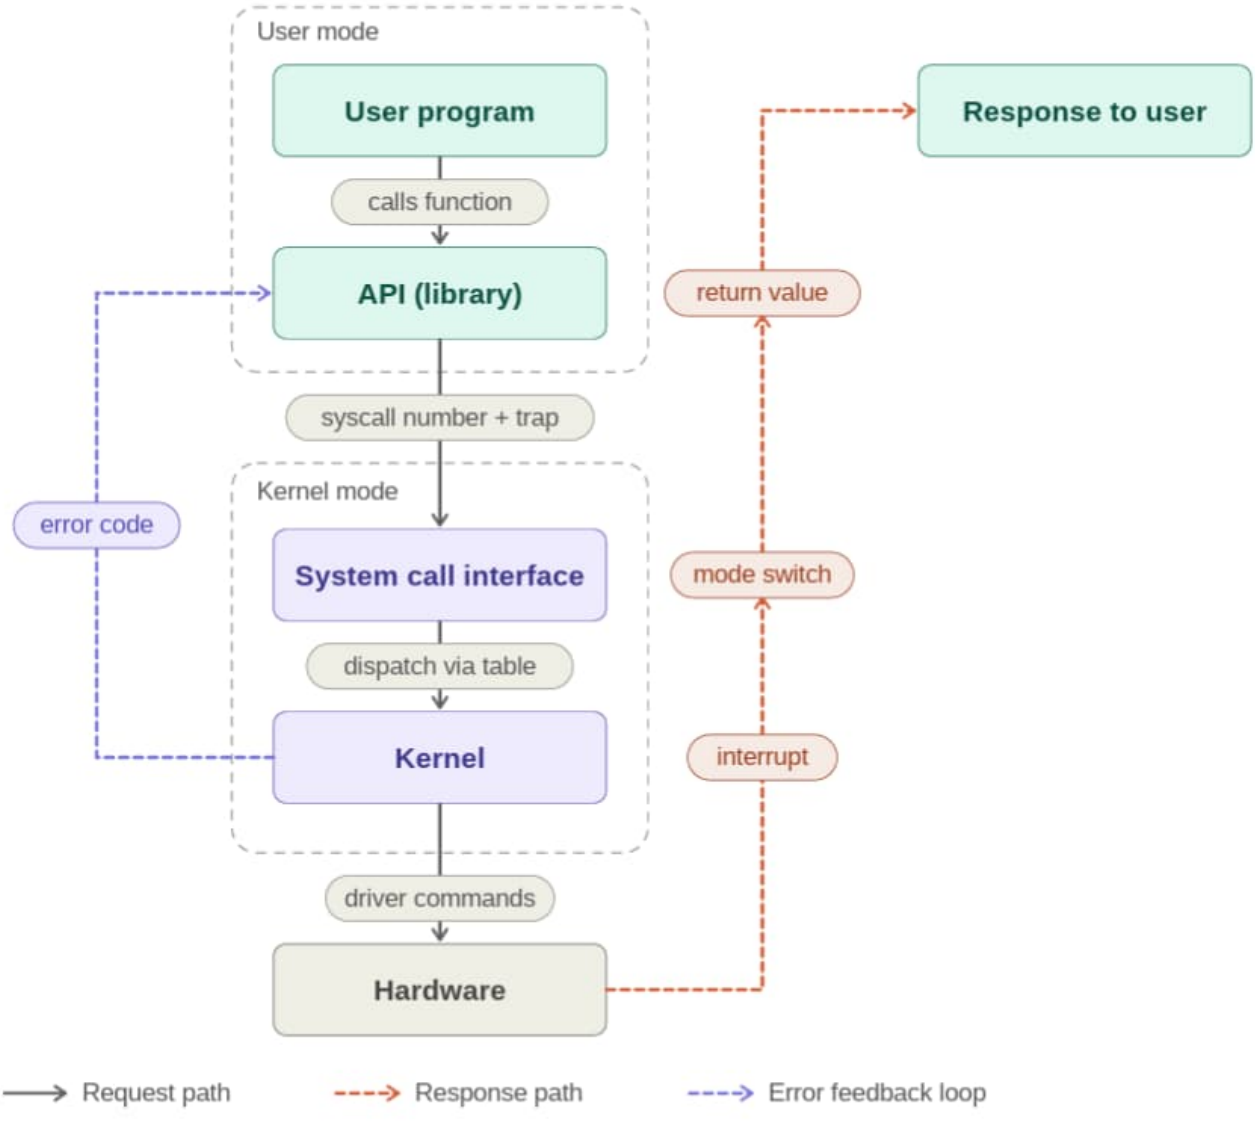

Question 3 (BL2)

Comparative concept map of Batch OS, Time-Sharing OS, Distributed OS and Real-Time OS, highlighting differences, similarities, advantages and limitations using linking phrases.

Question 4 (BL3)

Dynamic concept map of the execution flow: User Program → API → System Call Interface → Kernel → Hardware → Response back to User, with feedback loops and control flow paths.

Question 5 (BL3)

Hierarchical and functional concept map of Process, File, Device and Information system calls, and how they relate to OS services such as scheduling, memory allocation and device handling.
